

Car Wax Should Be Part of Your Regular Car Maintenance

I took my car to an auto detailing place the other day, and the guy in charge informed me that I had been neglecting my car for years. I was shocked. I adhere to all the requirements in my manual, take in the car for oil changes on schedule and keep it clean. The guy applying car wax, however, believed I was not so good. He completed the car wax job and proceeded to tell me what I had done wrong. "The paint is all oxidized. How could you let this happen?" I guess years of not using car wax is an offense so big, that I deserved public embarrassment. There were lots of other customers, sitting in their suits like me, glancing over to get a look at me being reprimanded. Honestly, I love my car. I had no idea I had treated it so poorly. Luckily, I was saved by the guy who put my car wax on.

Car wax forms a protective layer on your car. Car wax is to car paint, as conditioner is to hair for a person. It forms a barrier to shield from outside elements. As a bonus, your car will shine and little imperfections do not show as much. Regular application of car wax can keep your car looking new. You do not have to go to a car detailing place like I did. After my little public scolding, I may choose to do it myself in the future. There are so many different kinds of car wax out there and they all are dependent upon how you apply them and when. When I took a look at a "Consumer Reports" snapshot of car wax, they concluded that the fancy ones do not perform any better than cheaper ones.

Wash and dry your car before you begin to put on any car wax. It is a good idea to check for any dirt that may be hiding in weird places before you start. Any remaining dirt might scuff your paint as you rub in the wax. Make sure your car is not in the direct sun. Obviously, it should not be too cold out either. Use a non abrasive sponge or cloth to apply the car wax in circular motions. Keep track of where you have placed the wax. Once the areas of car wax have turned foggy, you can take it off. Rub the wax off in circular movements with a clean rag. Shake out the cloth frequently, so you do not get any build up. Once the car is done, stand back and admire. Although you may have to give your arm some rest and relaxation, you can take heart in knowing that you do not have to wax again anytime soon. It is ideal to apply a new coat of car wax every quarter.
